

**** ENF Update – SNEC China Exhibition ****

By Kit Temple

Published 13th May 2008

ENF recently attended SNEC's PV exhibition in Shanghai (May 10th-12th 2008), with 14 of our staff joining the event.

Generally we found visitor flow to be very good and on a par with the famous European exhibitions (eg. Intersolar and PVSEC). We discussed with a number of manufacturers about how the exhibition went for them and they had the opinion that SNEC is the best exhibition in China at the moment. ENF has also attended a number of China exhibitions during the past 12 months and has found SNEC to be the best one.

In terms of exhibitors, there were a very large number of mostly Chinese companies attending – but only a selection of each type of company. So our industry directory team spent the full three days collecting company details for the website directory, but the market research team had a limited number of ingot & wafer manufacturers to talk to and ENF's trade team found only a selection of the panel manufacturers with certified panels attending the exhibition. However, it should be noted that this limited selection of key company types was better than the other Chinese exhibitions that ENF has attended.
